WHAT IS CLAIMED IS:

1. A method of filling an order at a product moving device, comprising:

receiving a list, including at least one item,
representative of the order at the product
moving device;

displaying the list to an operator on a display
device;

placing an item on the list on the product
moving device;

detecting an item placed on the product moving
device; and

reflecting detection of the item in the product
moving device on the list.

2. The method of claim 1 wherein detecting the item
on the product moving device further comprises:

receiving a signal from a tag on the item; and
identifying the item based on the received
signal.

3. The method of claim 2 wherein receiving the
signal includes:

receiving data from the tag related to the item
at the product moving device.

4. The method of claim 2 wherein receiving the
signal further includes;

receiving a radio frequency (RF) signal from the
tag on the item.

5. The method of claim 1 wherein receiving the list further comprises:

receiving a number desired for each of the at least one item.

6. The method of claim 5 wherein displaying the list further comprising:

displaying the desired number of the at least one item from the list on the display device on the product moving device.

7. The method of claim 6 and after detecting further comprising:

deducting the number of the item detected from the desired number of the item in the order; and

updating the display device to reflect a new number of the item remaining to fill the order.

8. The method of claim 1 further comprising:

receiving an indication of a next item in the list to load on the product moving device.

9. The method of claim 8 further comprising:

displaying on the display device the next item on the list.

10. The method of claim 9 further comprising:
highlighting on the display device the next item
to obtain on the list.
11. The method of claim 1 further comprising:
receiving at the display device an indication of
specific handling instructions for one of
the at least one item on the list.
12. The method of claim 11 further comprising:
receiving at the display device instructions
indicating a specific loading pattern for
the order
13. The method of claim 9 further comprising:
receiving an indication of a direction to a next
item on the list.
14. The method of claim 1 further comprising:
querying the operator about additional items
not on the list.
15. The method of claim 1 further comprising:
determining if the detected item is on the list;
and
providing an indication to the operator if the
detected item is not on the list

16. The method of claim 15 further comprising:
adding the detected item to the list on the
display device
17. The method of claim 16 further comprising:
displaying on the display device the detected
item in a format different from the at
least one item originally on the list.
18. The method of claim 1 further comprising:
accessing additional data about one of the at
least one item on the list through the
display device.
19. The method of claim 18 wherein accessing the
additional data further comprising:
using a user interface component of the display
device to access the additional data for
the at least one item.
20. The method of claim 1 wherein when a last item
on the list is placed on the product moving device,
the method further comprising:
instructing the operator of the product moving
device to take the product moving device to
a specific location.

21. The method of claim 1 further comprising:
removing the item from the list in response to
the detection of the item on the product
moving device.
22. An order filling system comprising:
a first computer system;
a picklist containing a list of desired items;
at least one reader connected to the first
computer system;
a product moving device;
a display device connected to the product moving
device configured to display the picklist;
a product moving device reader connected to the
product moving device; and
wherein the picklist is generated at the first
computer system and transmitted to the
product moving device from the at least one
reader to the product moving device reader.
23. The order filling system of claim 22 wherein the
product moving device comprises:
a product moving portion;
a product loading portion;
a reader located on the product moving portion;
a tag located on the product loading portion;
and
wherein the order is stored on the tag.

24. The order filling system of claim 23:

wherein the product moving portion and the product loading portion are separate components that are configured to be coupled together; and

wherein the picklist stored on the tag is transmitted to the display device on the product moving portion when the product moving portion and the product loading portion are coupled.

25. The order filling system of claim 23 wherein the product moving portion is a forklift; and wherein the product loading portion is a pallet.

26. The order filling system of claim 23 wherein the tag is configured to hold data related to an order including a picklist.

27. The order filling system of claim 26 wherein the tag is configured to read data from an item tag that is placed in proximity to the product loading portion.

28. The order filling system of claim 27 wherein the reader of the product moving portion is configured to receive information from the product loading portion tag as items are placed on the product loading portion.

29. The order filling system of claim 22 wherein the display device comprises:

- an order information area;
- a location area;
- an information area; and
- a user interface area.

30. The order filling system of claim 31 wherein the order information area comprises:

- an order number area;
- a product loading portion display area configured to display an identifier number for the product loading portion; and
- a picklist area configured to display data related to items on the picklist.

31. The order filling system of claim 32 wherein the picklist area comprises:

- a description for each item on the picklist;
- a quantity of each item required;
- a number of each item present on the product loading portion; and
- a number of each item remaining to be picked to finish the picklist.

32. The order filling system of claim 31 wherein the picklist area further comprises

- a location indicator for each item providing information as to a current location of each item on the picklist.

33. The order filling system of claim 31 wherein in response to an item being placed on the product loading portion, the display device is configured to change the number of the item present and the number of the item remaining.

34. The order filling system of claim 29 wherein the user interface area comprises a plurality of buttons on the display device.

35. The order filling system of claim 34 wherein the user interface is configured to change the information displayed in response to a user input.

36. The order filling system of claim 29 wherein the display device is configured to provide an alert if an item placed on the product loading portion that is not contained in the picklist.

37. The order filling system of claim 23 wherein the tags and readers operate using radio frequency (RF).

38. The order filling system of claim 23 further comprising:

- a second computer system for generating the picklist; and

- a transmission link between the first computer system and the second computer system.

39. The order filling system of claim 38 further comprising:

a portable electronic device; and

wherein the second computer system transmits the order to the portable electronic device and the portable electronic device transmits the order to the first computer system.

40. The order filling system of claim 39 wherein the product moving device is a shopping cart.
